# Maths gradient of a line worksheet

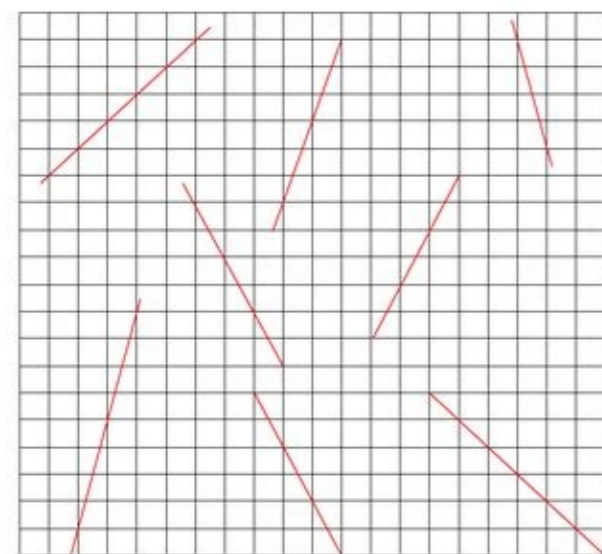

## Naming straight-line graphs with positive or negative gradients - Examples

## GRADIENTS

Find the gradient of the following lines.

Gradient of a line corbettmaths worksheet.

With a positive approach, you might be surprised to see how much progress your child starts to make. @MathCoachCorner/Twitter Personalize Math Assignments Numbers sometimes work in very interesting ways. In fact, some students find math to be difficult and dislike it so much that they do everything they can to avoid it. These resources are designed to get students to understand properly the topic they are working on. That might work in a history class, but for math, it's critical to really understand the mathematical concepts to achieve long-term success. Don't put off giving them rewards for their hard work! They shouldn't have to wait until they achieve big things like getting A's on report cards and outstanding test scores. Giving students some control over how they learn allows them to adapt and incorporate their strengths, and it also conveys your belief in their ability. The sets of worksheets include a lot of repetition and are useful for teaching a topic or revision. Reward your student as you go with simple but cool treats like setting up a math game to play on a computer or mobile device in place of a regular study session. Even if you start to feel frustrated yourself, take a short break to relax and then seek guidance from online sources or another person to help you figure it out. However, teachers and parents who homeschool follow a curriculum. Don't forget to include plenty of time for questions and allow them time to truly understand the concepts before moving on to the next topic. @MathCoachCorner/Twitter Apply Math to Real-World Scenarios When you talk to students, it becomes clear that one of the key problems with math for many of them is that it just seems too abstract for them. Don't let them do it! Instead, raise the bar with even bigger challenges to send a powerful signal that they are always expected to do their best. @mathematicsprof/Twitter Plan in Advance For most parents, students bring home specific items as homework, and they simply need to be prepared to help with what they're given. In short, that means some problems can be solved in more than one way. It's critical to be vigilant about what you say when it comes to talking about math and helping them with it. Please see my other resource for worksheets about perpendicular lines and their gradients which is available via my shop at Creative Commons "NoDerivatives" Select overall rating (no rating) Your rating is required to reflect your happiness. It's good to leave some feedback. Something went wrong, please try again later. Brilliant for a non-specialist like me! Empty reply does not make any sense for the end user. Excellent differentiated questions, Thank you! Empty reply does not make any sense for the end user. Empty reply does not make any sense for the end user. Excellent! Excellent! Excellent!!!! Empty reply does not make any sense for the end user. Report this resource to let us know if it violates our terms and conditions. They feel that way because they don't understand all the ways math relates to daily life in the real world — so show them! Applying equations, formulas and geometry to common tasks they can see and participate in helps students understand just how important math is in our lives. @mathematicsprof/Twitter Be Positive Kids' brains are like sponges, and they absorb all kinds of remarks and suggestions from adults — both positive and negative. If you don't encourage understanding over memorization from the beginning, students could find themselves on shaky foundations as the math gets progressively harder. @MathCoachCorner/Twitter Reward Progress No matter what subject you're working on with your child or student, it's important to reward progress. When that's the case, it's vital to look at the topics students need to know for their exams, and it takes some advance planning to make sure you cover all of them in detail. Teachers should keep parents informed about exactly what they've been doing in class, while parents — who are generally the ones called on to help out at home on a more one-on-one basis — should seek guidance from teachers and inform them of any problem areas that are particularly challenging. @mathematicsprof/Twitter MORE FROM QUESTIONSANSWERED.NET Work to build confidence from the outset — perhaps with a fun game that reinforces beginning math concepts — to ensure you take that fundamental first step to helping your child learn and succeed. @MathCoachCorner/Twitter Big ideas in math tend to naturally inspire curiosity, but curiosity is a valuable tool even for basic concepts. Above all, stay positive and don't express a negative attitude that your child is likely to mimic. For example, instead of just giving them an exercise or worksheet to complete, you could prepare several different exercises and let them choose what they want to do. Last updated 28 September 2018 A set of worksheets that shows how to calculate gradients of lines drawn on grids then moves on to equations of straight lines and the form  $y = mx + c$ . Our customer service team will review your report and will be in touch. They will enjoy it a lot more than a certificate or badge. @MathCoachCorner/Twitter Collaborate with Teachers and Parents Whether you're a teacher or a parent, it's always a good idea to collaborate with each other. Whether you're a parent helping your child at home or a teacher in the classroom, tackling the process with the right teaching methods can make a huge difference. @mathematicsprof/Twitter Some students love math — others not so much. If you're not sure where to start, take a look at these time-tested ways to help students with math. Build Confidence Some students who struggle to understand certain math concepts become discouraged and start believing that math simply isn't for them because they aren't any good at it. For example, if students are struggling to understand how a fraction with a larger number on bottom could be smaller than a fraction with a smaller number on bottom, introduce some real-life items — like maybe large cookies — and let them explore the differences between dividing something into 10 pieces versus dividing it into four pieces. Math may feel a little abstract when they're young, but it involves skills they will need in life long after they're out of school. @MathCoachCorner/Twitter Additionally, letting their curiosity guide them gives them a chance to discover their own passions for the particular subjects they may enjoy most. While it's certainly true that some students understand math concepts more quickly than others, everyone can learn math with the right techniques and tools. They are far more likely to be enthusiastic about a task they gave themselves. @memesxmoney/Twitter Prioritize Understanding, Not Memorization In the academic world, too much emphasis is sometimes placed on memorizing information for exams. If you like my style please send me suggestions of topics that you would like to see a resource created for. As a result, some may try to get away with only doing the bare minimum to get a passing grade. This will keep you on track and help you get past hurdles quickly. Be sure to encourage curiosity and questions at all times, especially when you're helping them with new or challenging concepts. Raise the Bar Okay, every student won't fall in love with math, even after you build their confidence and show them they can learn it. Some of my resources are at a very basic level and are written for older teenagers and adults. That makes math important for more than just a grade on a report card. In the sports world, this often comes in the form of medals or trophies.
